Emilio Parra González

Software Developer | Java, Python, TypeScript | Backend and full-stack

Emilio.PG95@gmail.com | (222) 752 8799 | Puebla, Mexico
github.com/EmilioPG13 | linkedin.com/in/emilio-parra-3813a5107

Software developer (Java, Python, React) focused on reliable backend services, testing and cloud deployment, with full-stack and automation experience. Works with Claude Code and MCP servers.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL

Backend: Spring Boot, Spring Security, JPA (Hibernate), Flyway, Node.js, Express, REST APIs (OpenAPI), FastAPI, Pydantic, SQLAlchemy (async), Alembic, PostgreSQL

Frontend: React, TanStack Query, Tailwind CSS, Vite

Cloud, DevOps, testing: AWS (SQS, EKS, RDS), Kubernetes, Helm, Terraform, Docker, GitHub Actions, JUnit 5, Testcontainers, Playwright, Neon, Northflank

AI: Claude Code, MCP servers, NVIDIA NIM, multi-agent workflows

Languages spoken: Spanish (Native), English (C2), German (B1)

PROJECTS

Court Booking | Live demo: reservation-system-azure.vercel.app | Code: github.com/EmilioPG13/reservation-system

Python 3.13, FastAPI, PostgreSQL, React 19, TypeScript

- Padel court booking app where double bookings are impossible by construction: a PostgreSQL exclusion constraint on a time range rejects overlapping reservations, and the API turns the violation into a 409 response.
- Proved it with a test that fires 20 simultaneous requests at one slot against a real PostgreSQL: exactly one succeeds and nineteen are rejected. An end-to-end Playwright test races two browsers for the same slot.
- React court grid (10 courts, one API call per day) refreshed with TanStack Query, with a typed client generated from the API's OpenAPI schema.
- CI on GitHub Actions. Deployed on Vercel, Northflank and Neon.

Webhook Delivery Platform | github.com/EmilioPG13/webhook-delivery-platform

Java 25, Spring Boot 4.1, PostgreSQL, Amazon SQS, Kubernetes, Terraform

- Webhook delivery service with HMAC-SHA256 signed requests, retries over about 47 hours, a dead-letter queue, a circuit breaker per endpoint and SSRF protection.
- No events lost on worker crashes or queue outages (transactional outbox, at-least-once delivery), verified with Testcontainers tests on PostgreSQL 18.
- Load tested with k6: 400 events per second sustained, publish p95 near 10 ms. Packaged with Helm and deployed with Terraform to AWS; on local Kubernetes (kind), a rolling update under load lost 0 events in 3 runs.

Price Tracker Bot | github.com/EmilioPG13/price-tracker-bot | Live: t.me/Emilio_price_tracker_bot

Python 3.13, python-telegram-bot, SQLAlchemy, PostgreSQL, Docker, GitHub Actions

- Telegram bot that tracks prices at Cyberpuerta and Liverpool and alerts users when a price hits their target. 360+ tests at 91% coverage on SQLite and PostgreSQL in CI. On Northflank since September 2026.

Larsen Italiana Lead-Gen Website | github.com/EmilioPG13/Larsen-WebPage | Live: larsenitaliana.com

React 19, TypeScript, Express, PostgreSQL, Prisma

- Lead-generation site for an industrial knitting machine company with a catalog, quote form and JWT-secured admin panel. Frontend on Vercel.

EXPERIENCE

Digital Developer & Marketing — Jun 2026 to Present

Larsen Italiana, Internship (Estadía I and II)

- Sole person responsible for the digital area. Built and deployed the bilingual React/Vite website and set up Google Search Console.

EDUCATION

Web Development Bootcamp, DEV.F, Mexico City — Oct 2021 to Oct 2022

Full-Stack Engineer Certification, Codecademy — Sep 2025

Bachelor's in Marketing, Universidad Madero — Graduating 2027
